OVERVIEW

DevOps and Cloud engineer focused on building CI/CD pipelines, containerized systems, and AWS-based automation workflows. AWS Certified Cloud Practitioner with proven expertise in Docker, Kubernetes, Jenkins, and GitHub Actions. Skilled in designing self-healing infrastructure, automating deployment workflows and integrating shift-left security practices into DevSecOps pipelines.

Work Experience

E-Sutra Technologies

June 2026 – Present

Cloud & DevSecOps Intern

Remote

- Assisting in maintaining application deployments and supporting release management activities.
- Supporting CI/CD workflows and deployment automation processes.
- Monitoring infrastructure, application health, and system performance.
- Troubleshooting deployment and operational issues in Linux-based environments.
- Collaborating with development teams to ensure reliable and efficient application delivery.

SKILLS

Cloud: AWS (EC2, S3, IAM, VPC, ELB)

DevOps & Tools: Docker, Kubernetes, Jenkins, Terraform, Git/GitHub, GitHub Actions

Infrastructure: Linux, Minikube, KVM, VMware Workstation, ESXi

Networking & Security: Apache, Cloudflare, Nginx, SonarQube, Trivy, Vault

Programming: Python, Shell Scripting

PROJECTS

CI/CD Platform | [GitHub](#)

Built: An end-to-end DevSecOps pipeline for a containerized Python Flask application using Jenkins, Docker, Trivy and GitHub Actions.

Implemented: A 3-stage declarative Jenkins pipeline covering Docker image build, Trivy vulnerability scanning, and automated container deployment with health check endpoint.

Achieved: A fully automated build-to-deploy workflow with shift-left security scanning on every code push, eliminating manual deployment steps.

Resilient Server Monitoring Platform | [GitHub](#)

Built: A web-based server monitoring platform using Python and Flask, containerized with Docker and deployed on Kubernetes for real-time infrastructure monitoring and service health tracking.

Implemented: A dedicated failure detector module to continuously monitor service health, leveraging Kubernetes default restart policy for automatic container recovery.

Achieved: External accessibility for the monitoring dashboard via Kubernetes NodePort, enabling real-time anomaly visibility through a browser without additional ingress configuration.

DevSecOps CI/CD Pipeline | [GitHub](#)

Built: A security-focused Flask application demonstrating DevSecOps practices with an automated Jenkins CI/CD pipeline and container vulnerability scanning

Implemented: 4-stage Jenkins pipeline covering source code checkout with GitHub token authentication, Docker image build, Trivy security scan (HIGH/CRITICAL CVEs), and automated local deployment.

Achieved: Integrated security scanning into the deployment workflow ensuring no HIGH or CRITICAL vulnerabilities reach production, demonstrating shift-left security practices in a DevSecOps pipeline.

EDUCATION

Ajeenkya DY Patil University, Pune

Bachelor of Technology, Cloud Computing & Information Security

Aug 2022 – May 2026

Samruddhi Huge Patil Jr. College, Paithan

Intermediate Education

Aug 2020 – Apr 2022

Vivekananda English School, Partur

Higher Secondary Education

Apr 2019 – Mar 2020

CERTIFICATION

AWS Certified Cloud Practitioner (CLF-C02)

Fortinet Network Security Expert (NSE 1–3)
