OVERVIEW

Cloud and DevOps-focused engineering student driven by a proactive and solution-oriented approach. Built and experimented with cloud-based setups using AWS while exploring Azure fundamentals. Familiar with **AWS** and **Azure services**, automation, deployment workflows, and hands-on experience with **Docker**. Applies **Python** and **Linux** skills to automate tasks and support **DevOps workflows**. Passionate about cloud technologies and continuously learning to build reliable and production-ready systems.

SKILLS

Cloud: AWS, Azure (Fundamentals)

DevOps & Tools: Docker, Kubernetes, Git/GitHub, Jenkins, Linux, Virtualization, GitLab

Programming: Python, SQL, Shell Scripting

Databases: MySQL, MongoDB

Core Concepts: Operating Systems, Computer Networks, DBMS, Data Structures & Algorithms

Security: Network Security, Ethical Hacking

PROJECT

Cloud Deployment on Linux [GitHub](#)

Built: A self-hosted cloud storage system using Nextcloud on a Linux environment to enable secure file storage and access

Implemented: Installed and configured required components including web server (Apache/Nginx), PHP and database services, and set up system-level configurations and permissions

Achieved: Successfully deployed a functional private cloud solution, gaining hands-on experience in Linux system administration, application deployment, and real-world cloud-like infrastructure.

DevSecOps Application [GitHub](#)

Built: A Python Flask-based web application to demonstrate DevSecOps workflows and secure application deployment

Implemented: Containerized the application using Docker and defined deployment configurations using Kubernetes manifests

Automated: Created a basic CI/CD pipeline using Jenkins to build and deploy Docker images

Achieved: Successfully deployed and tested the application in a containerized environment, gaining hands-on experience in DevOps practices, automation and application deployment workflows.

Resilient Server Monitoring Platform [GitHub](#)

Built: A real-time monitoring dashboard using Python and Flask

Implemented: Self-healing infrastructure by detecting failures and automatically recovering services via Kubernetes

Integrated: Cluster management and health checks using kubectl and system metrics

Achieved: Hands-on experience with cloud monitoring, automation, and fault-tolerant system design

EDUCATION

Ajeenkya D Y Patil University, Pune

Aug 2022 - May 2026

Bachelor of Technology, Information Technology

CGPA: 8.3

Coursework: Cloud Architecture, Network Security, Virtualization, Computer Networks

Samruddhi Hugu Patil Jr. College, Paithan

Apr 2020 - May 2022

Intermediate Education

Vivekananda English School, Partur

Apr 2019 - Mar 2020

Higher Secondary Education

CERTIFICATION

AWS Certified Cloud Practitioner (CLF-C02)

Google - The Bits and Bytes of Computer Networking

Microsoft Azure Fundamentals (AZ-900)

Fortinet NSE 2 - The Evolution of Cybersecurity
