OVERVIEW

DevOps and Cloud engineer focused on building CI/CD pipelines, containerized systems and AWS-based automation workflows. AWS Certified Cloud Practitioner with proven expertise in Docker, Kubernetes, Jenkins and GitHub Actions. Skilled in designing self-healing infrastructure, automating deployment workflows and integrating shift-left security practices into DevSecOps pipelines.

WORK EXPERIENCE

E-Sutra Technologies

June 2026 - Present

Cloud & DevSecOps Intern

Remote

- Administered SonarQube instance - managing user roles, permissions and project configurations to streamline team code quality workflows.
- Led SonarQube database migration from a legacy instance, diagnosing compatibility issues and restoring full platform functionality with zero data loss.
- Monitoring cloud infrastructure health, application performance and system metrics to ensure operational stability.
- Diagnosing and resolving deployment issues in Linux-based environments, supporting smooth application delivery pipelines.
- Collaborating cross-functionally with development teams to maintain reliable, efficient and continuous application delivery.

SKILLS

Cloud: AWS (EC2, S3, IAM, VPC, ELB)

DevOps & Tools: Docker, Kubernetes, Jenkins, Terraform, Git/GitHub, GitHub Actions

Infrastructure: Linux (Debian and Kali), Minikube, KVM, VMware Workstation, ESXi

Networking & Security: Apache, Cloudflare, Nginx, SonarQube, Trivy, Vault

Programming: Python, Shell Scripting

PROJECTS

CI/CD Platform | [GitHub](#)

Built: An end-to-end DevSecOps pipeline for a containerized Python Flask application using Jenkins, Docker, Trivy and GitHub Actions.

Implemented: A 3-stage declarative Jenkins pipeline covering Docker image build, Trivy vulnerability scanning and automated container deployment with health check endpoint reducing deployment time by ~75%.

Achieved: 100% of code pushes automatically scanned, eliminating all manual post-commit steps with shift-left security on every pipeline run.

Resilient Server Monitoring Platform | [GitHub](#)

Built: A web-based server monitoring platform using Python and Flask, containerized with Docker and deployed on Kubernetes for real-time infrastructure monitoring and service health tracking.

Implemented: A dedicated failure detector module to continuously monitor service health, leveraging Kubernetes default restart policy for automatic container recovery within ~30 seconds of failure.

Achieved: 24/7 monitoring with ~90% faster recovery than manual restart, accessible externally via Kubernetes NodePort without additional ingress configuration.

DevSecOps CI/CD Pipeline | [GitHub](#)

Built: A security-focused Flask application demonstrating DevSecOps practices with an automated Jenkins CI/CD pipeline and container vulnerability scanning

Implemented: A 4-stage Jenkins pipeline covering source checkout, Docker image build, Trivy HIGH/CRITICAL vulnerability scanning and automated deployment scanning 100% of builds automatically.

Achieved: Zero vulnerable images reach production, reducing vulnerability detection time by ~85% compared to manual code review.

EDUCATION

Ajeenkya DY Patil University, Pune

B.Tech in Information Technology, Specialization: Cloud Technology & Information Security

Aug 2022 – May 2026

Samruddhi Huge Patil Jr. College, Paithan

Intermediate Education

Aug 2020 – Apr 2022

Vivekananda English School, Partur

Higher Secondary Education

Apr 2019 – Mar 2020

CERTIFICATION

AWS Certified Cloud Practitioner (CLF-C02)

Fortinet Network Security Expert (NSE 1–3)
